

Problem

Every year, British Petroleum releases a statistical review of world energy.

Static visuals do not help users to be inquisitive about the data and interact with it in new ways.

Solution

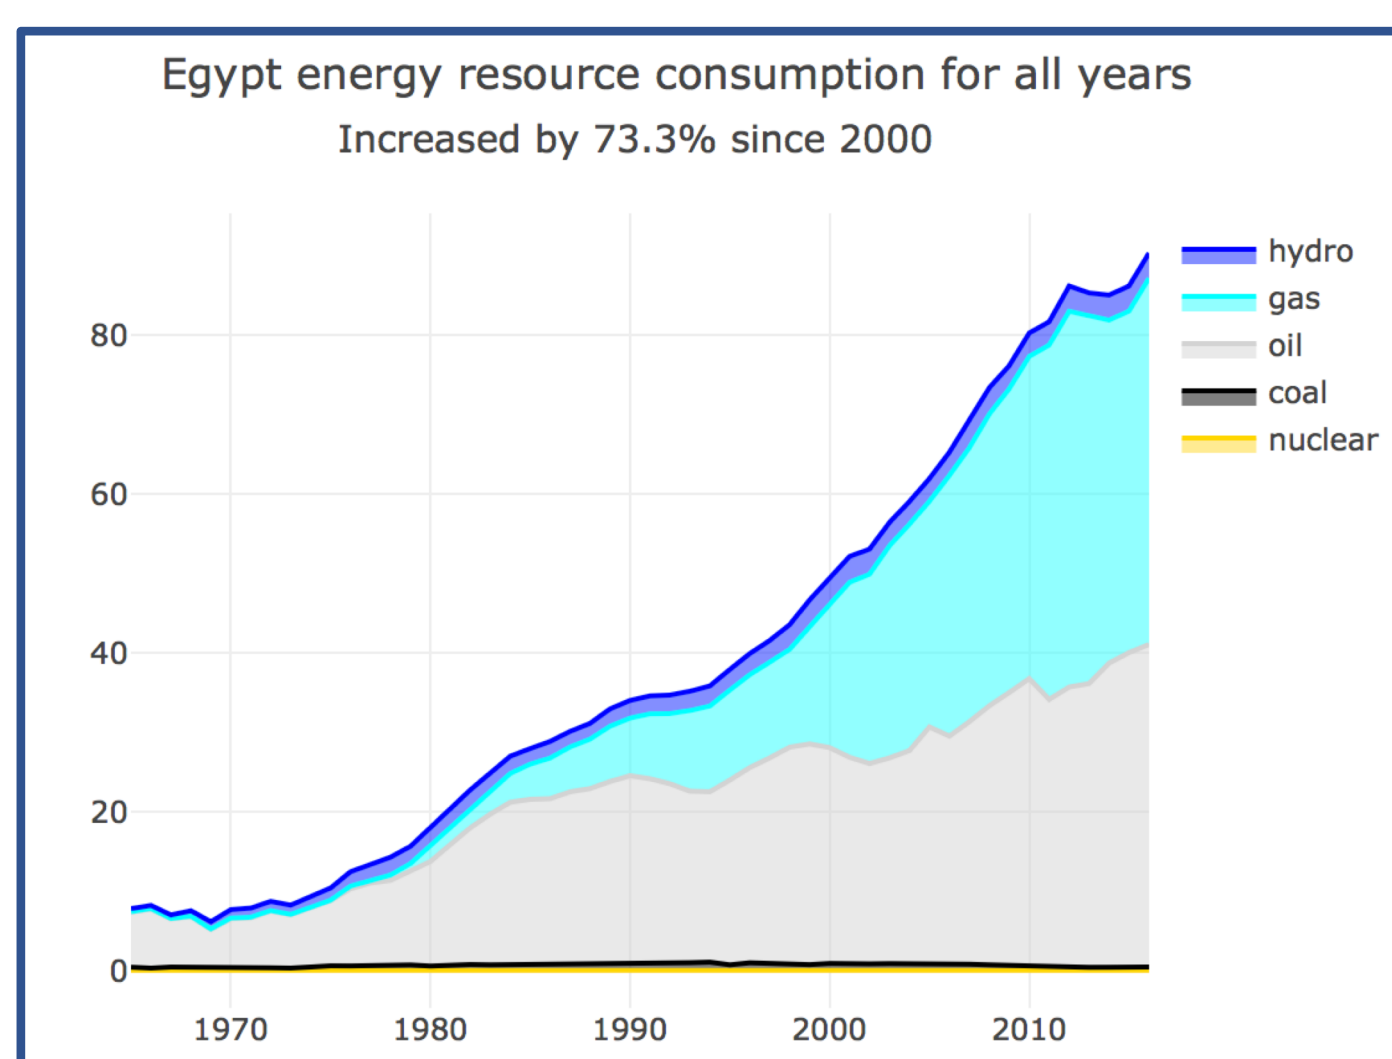

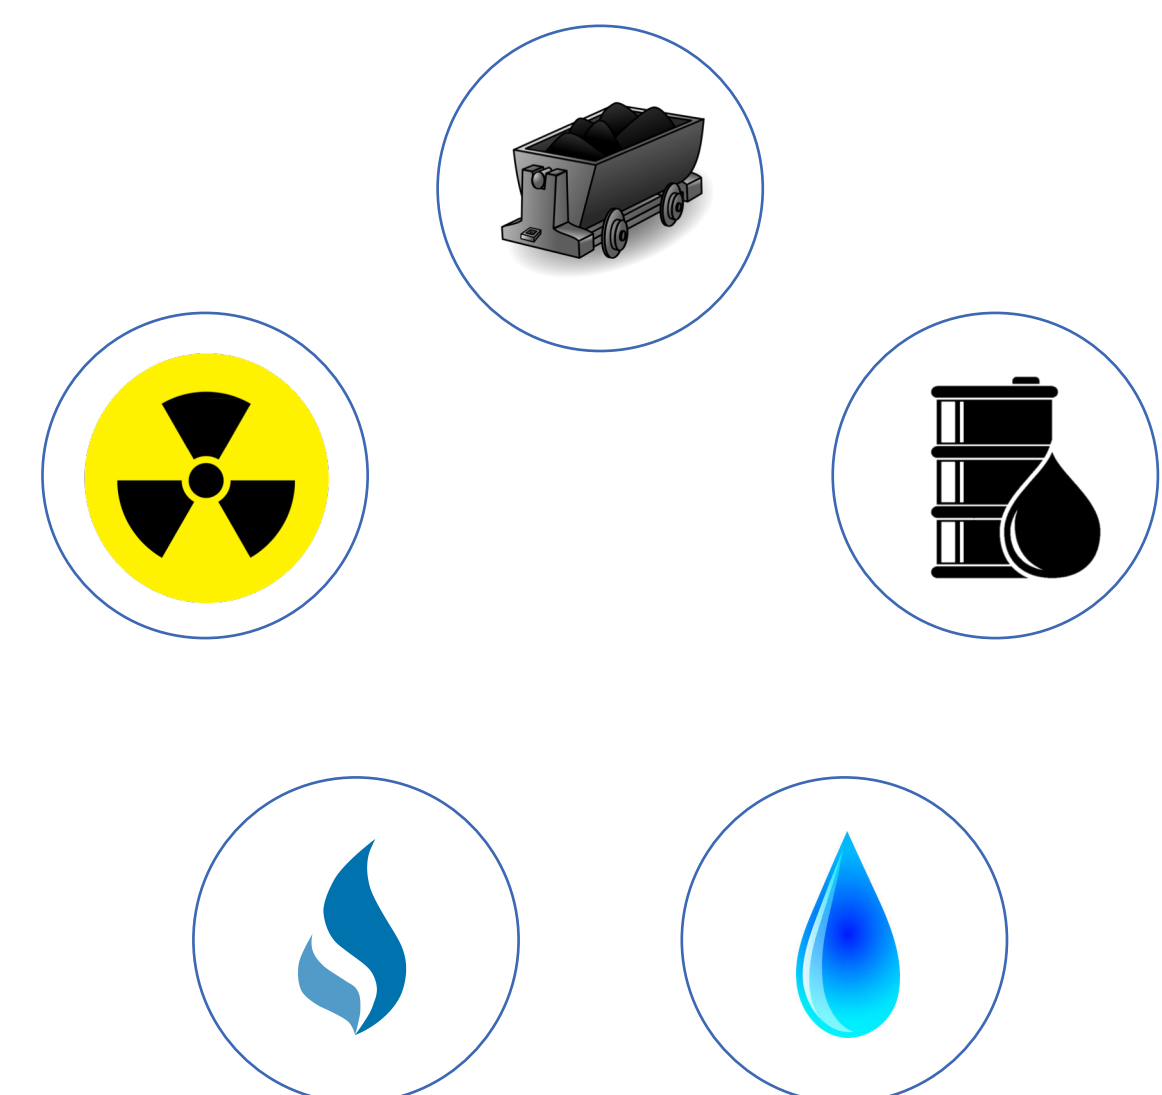

Serve web-based interactive visualizations on an open platform.

The Energy Data Browser will help users uncover hidden stories through the nuances of energy data.

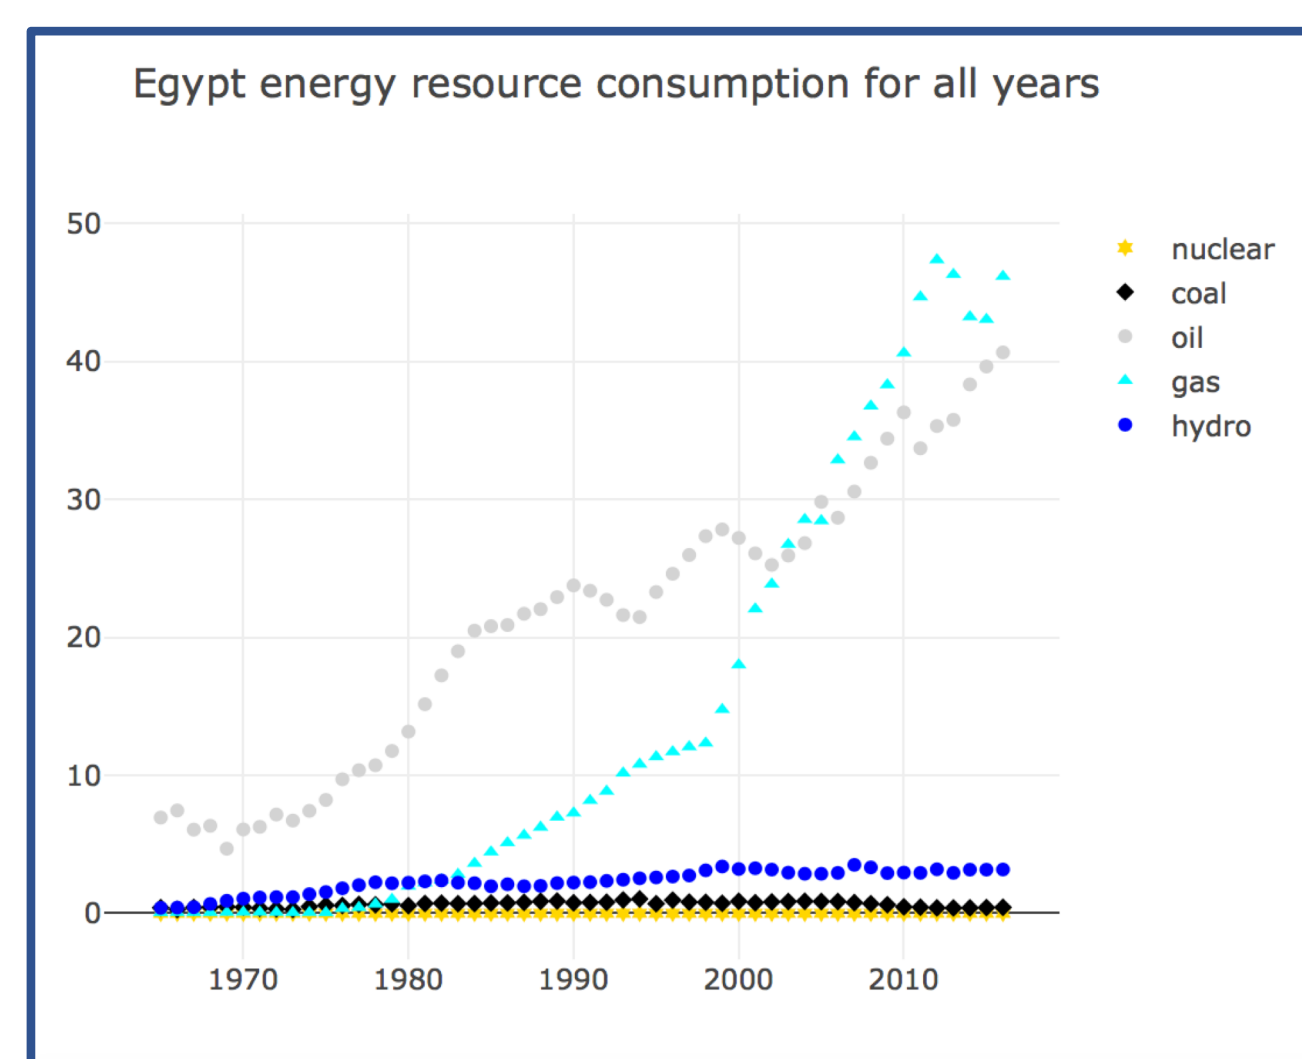

Hover over different countries to view net energy consumption.

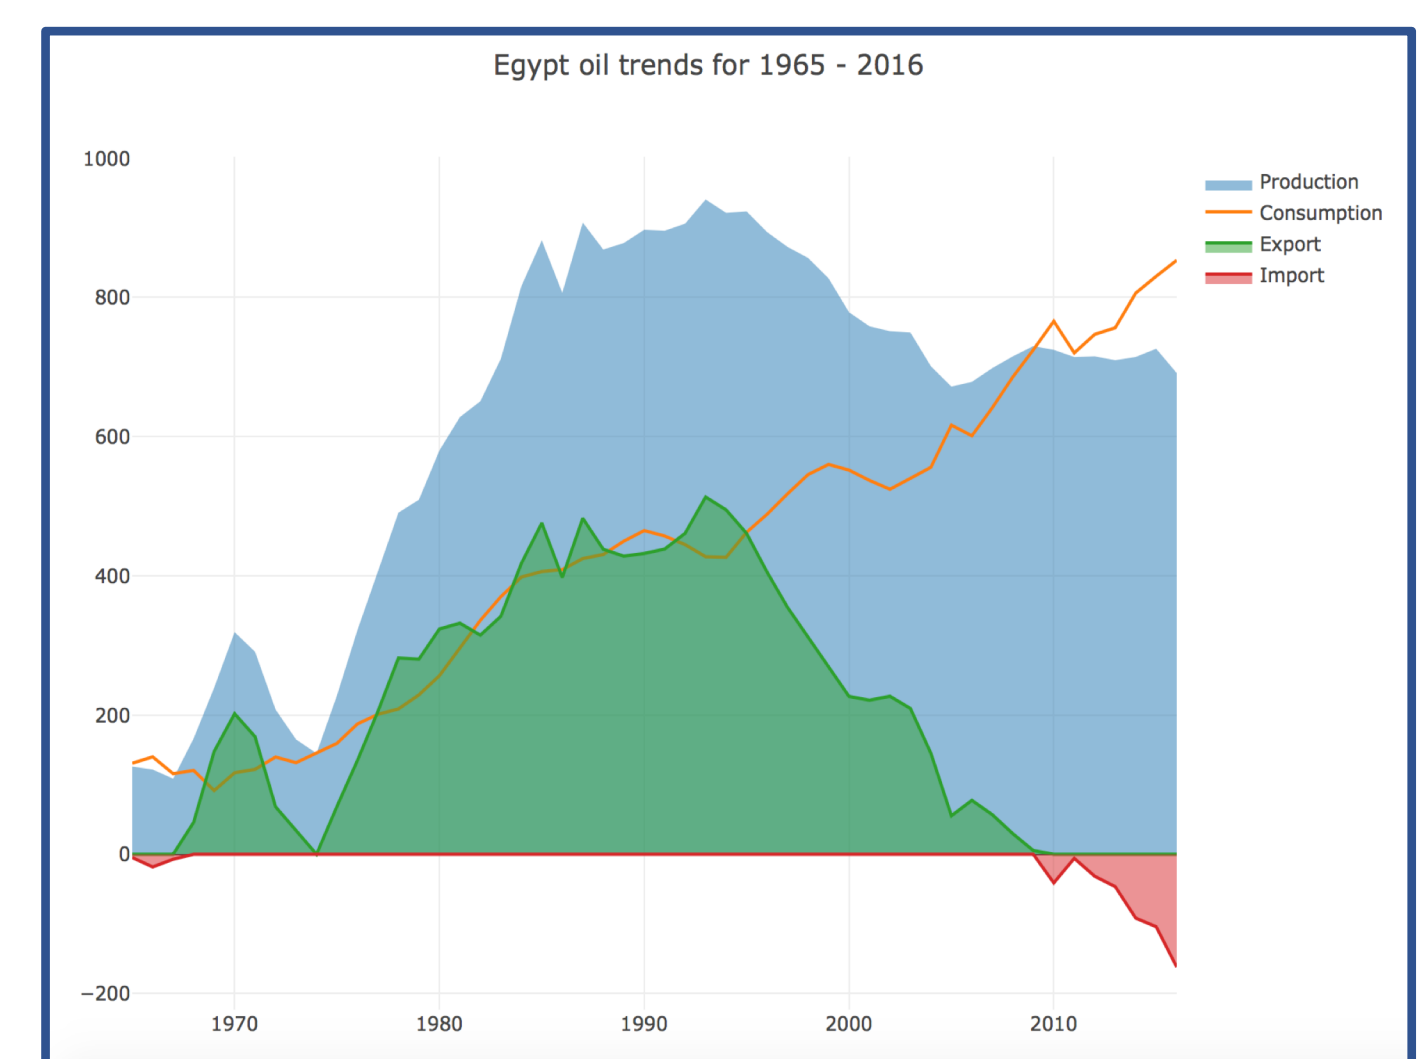

Click on a country to visualize trends of energy resources:

Users see energy resources' contribution to Egypt's total consumption.

This chart shows Egypt's reliance on conventional energy sources.

Egypt transitioning into an oil importer since the Egyptian revolution.
