

Entree.ai

Let's talk about food

Entree.ai is a **Google Assistant Action** that uses a proprietary **natural language model** alongside a conversational **voice-based user experience** to order food online via voice as naturally as in real life.

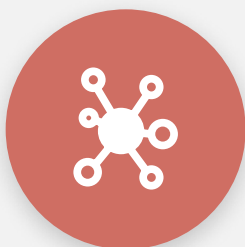

Hey Google, order one Dick's deluxe, three orders of fries, and a chocolate milkshake from Dick's.

Sure! That'll be \$12.21. Will that be all?

Yes, that's all. Wow, that was easy!

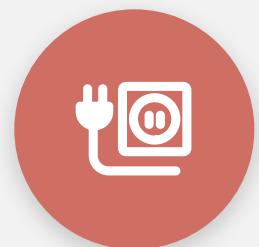

Just like in real life, order in a **single phrase**.

Natural language model developed specifically for food ordering that can process complex food order queries.

A conversational UI that is exactly that: conversational. Order meals as naturally as talking to an actual restaurant worker.

Menu integration with restaurants both big and small allows for Entree.ai integration as easy as linking a few APIs.
