

# PROJECT **GRAVITY**

unified people for a unified EHR system

Bringing patients, clinicians, and health care leaders together to create a market demand for robust interoperability between electronic health record (EHR) systems

**2009**

Meaningful Use legislation incentivizes providers to use EHR systems

**2017**

Nearly 90% of providers are using a basic EHR system

*and yet,*

**patients are frustrated, and clinicians can't make informed decisions.**

- Despite a substantial increase in EHR adoption, health data cannot easily follow a patient across care settings
- EHR vendors lack the economic incentive to pursue interoperability solutions
- Complete EHR interoperability requires coordinated action across multiple stakeholders to enact vendor incentives into law

Gravity provides a dedicated space to discuss and advocate for EHR interoperability improvements.
