# SafiStation™ Chlorine Generator

Remote Data Monitoring Dashboard

Infections

Hospital acquired infections in low to middle income countries directly caused **2.7 million newborn deaths**, among other medical issues.

Sanitation

Current sanitation delivery in these countries is **not reliable**. Disinfectant availability in these areas needs to be **consistent**, and of a higher quality.

Safistation™

PATH and MSR teamed up to create the **SafiStation ™** which uses salt and water to make a **chlorine disinfectant** solution.

Dashboard

The previous data dashboard **lacked explanatory visuals**, and PATH was also **unable** to give **specific data permissions** to their customers.

Impact

We updated the dashboard for customer segmentation and **reconfigured visualizations** to better monitor the safistation devices.
