

## Problem Statement

Absence of digital footprint of libraries makes most public libraries invisible to people who depend on them.

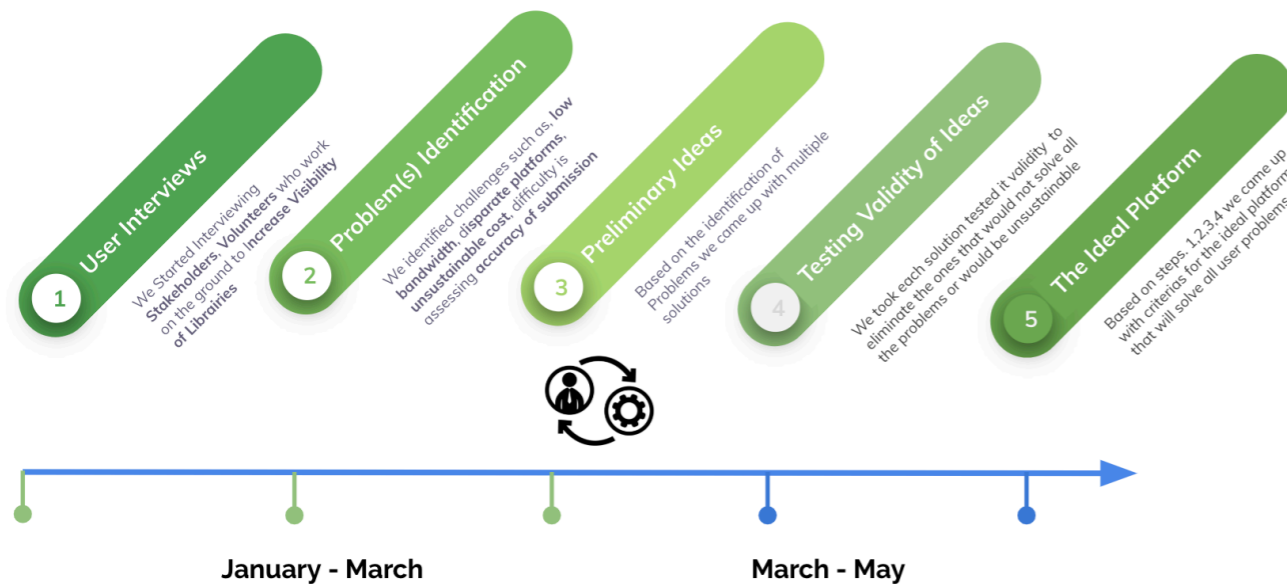

Absence of a custom centralized data aggregation and consumption platform jeopardizes efforts of data collection on scale, making growth slow.

The lack of data makes it difficult to track goals and quantify the impact of funding.

### Our Process

### Solution

Recommendation for the ideal platform that :

- 1) Solves the data collection, curation and access.
- 2) Supports user personas of the administrator, contributor and champion.
- 3) Is a sustainable solution that will stand the test of time
