Verify your Vote  
Protect your Voice

## Our National Elections are Vulnerable

**8000+**

### Jurisdictions in the USA

Each managing their own systems and security measures. Small jurisdictions cannot defend against large hacking organizations.

**0**

### Ways to Detect Tampering

If votes in an election have been tampered with, there is no solid evidence. This means hackers and officials can alter results undetected.

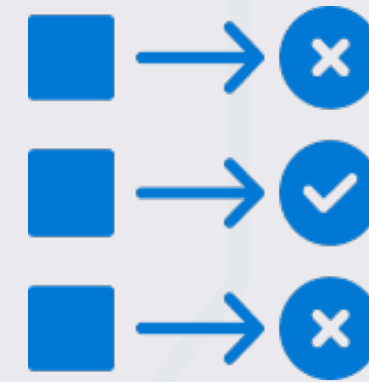

### Secure Voting

Uses cryptography to add security and cut out the middle man.

### Evidence of Tampering

Creates measure to detect and prevent tampering of the votes.

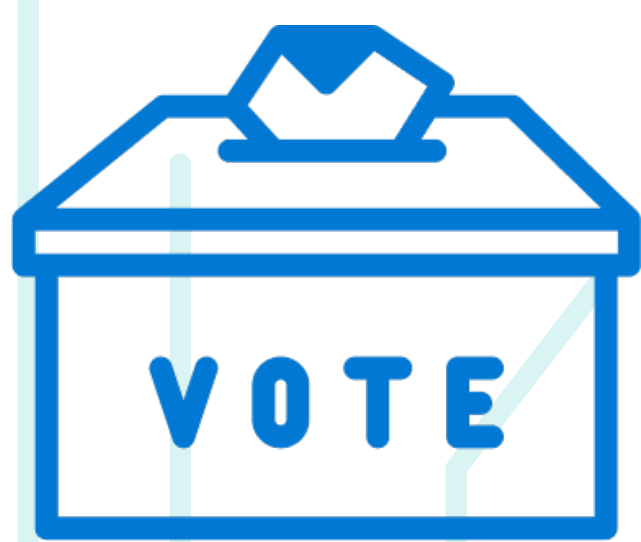

### Verify Elections

Allows voters to check if the vote was correctly counted after the election.

### Open and Free

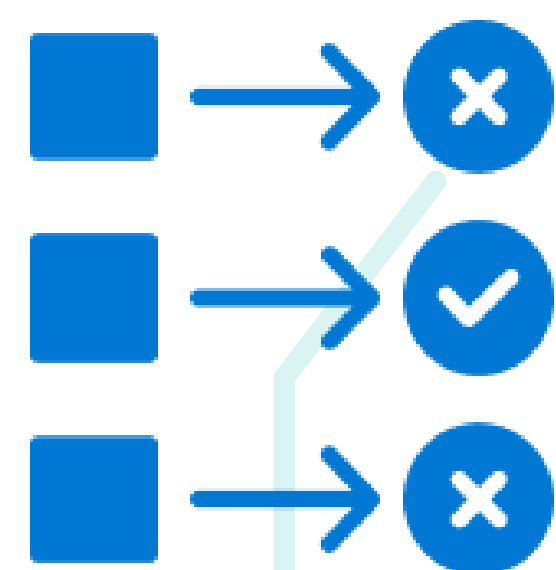

This is open to everyone and anyone can write code to check elections.

**1**

### Vote

Electronic kiosks encrypt and record your vote in the database.

**3**

### Verify

After the election you can verify your vote online to check for inaccuracies.

**2**

### Tracking Code

Each ballot comes with a code. Keep them to verify your vote online afterwards.
