## Most Park and Ride Users find it's hard to park

"Public transportation takes a lot of extra commute time"

"It's too hard for me to find parking space"

The Seattle Squeeze makes its transportation system strained. Although people are recommended to utilize Park and Ride facilities, Our team EVerEST addresses this information problem through providing real-time parking availability information. We collected real-time data through sensors, processed streaming data through cloud database, and visualized dynamic data through web application. Our solution not only helps users have equitable access to parking information, but also helps transit agencies make more effective decisions to solve Seattle traffic challenges.
