

SSCode

Synchronous Server Code

Issues with Collaborative Coding Online

Disconnection

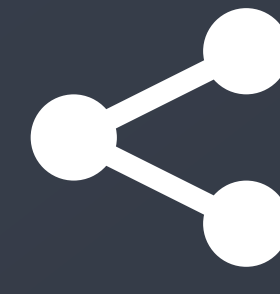

Most coding is done asynchronously, resulting in less interaction

Git can be Tedious

Git push and pull is needed even to view small changes to updated files

Sharing Code is Difficult

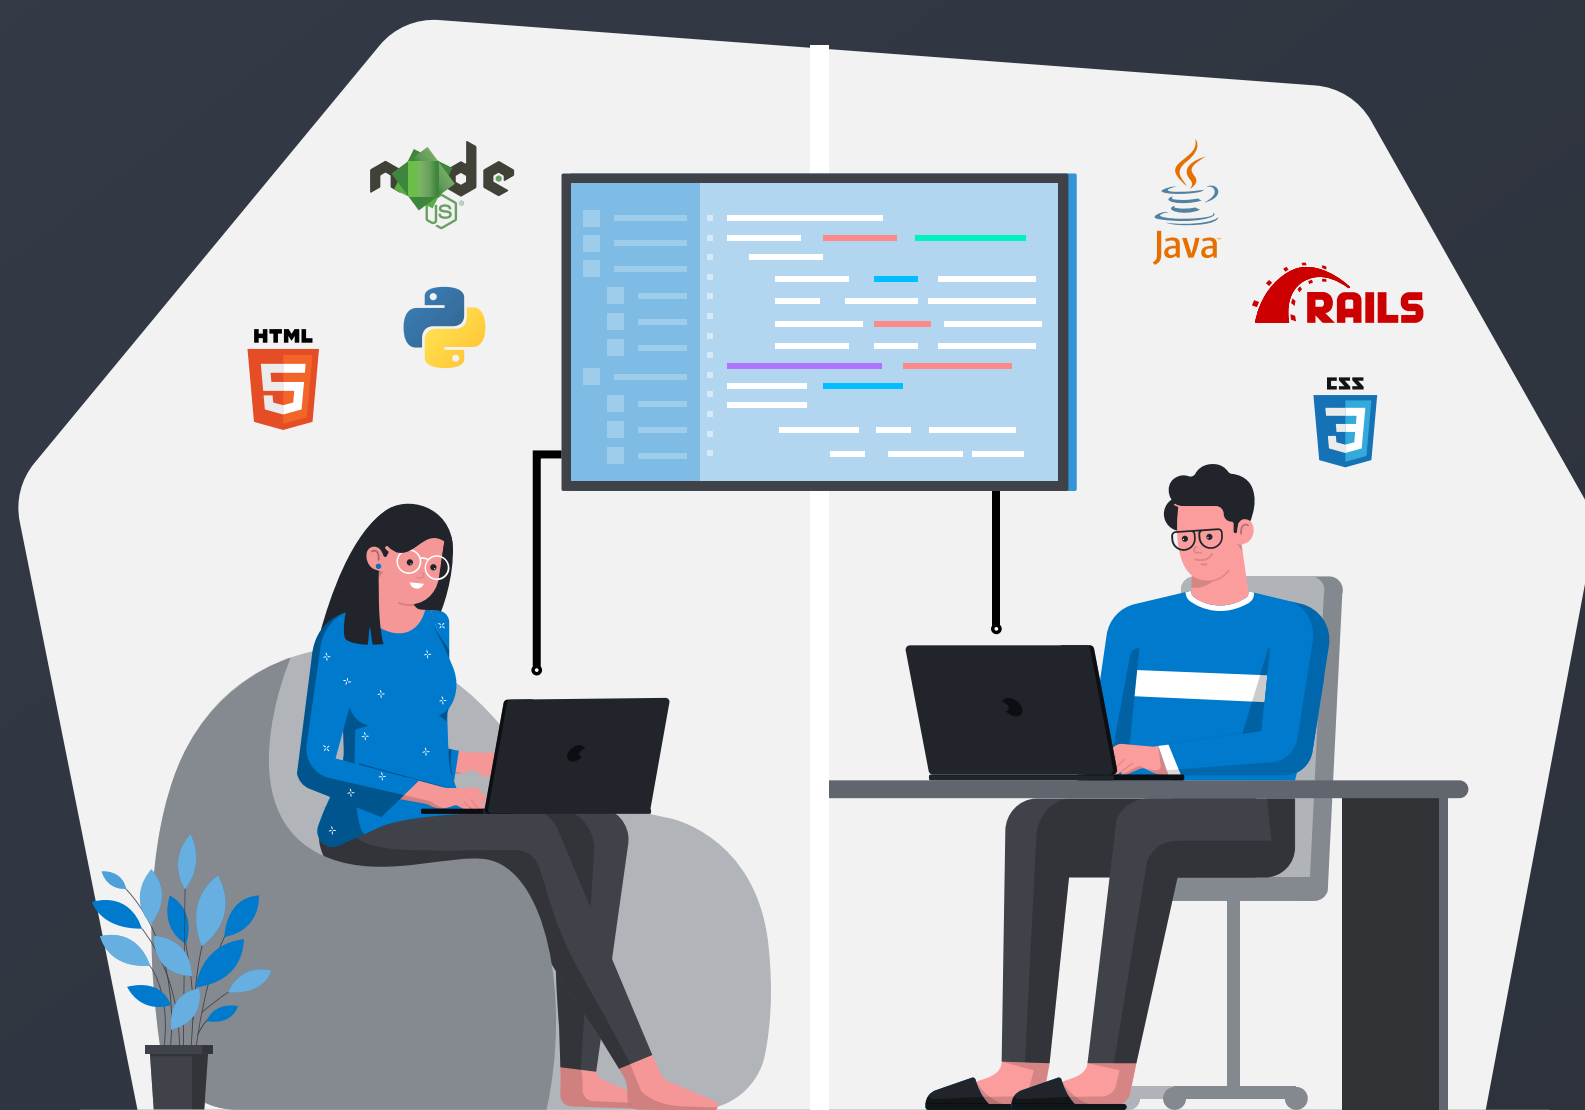

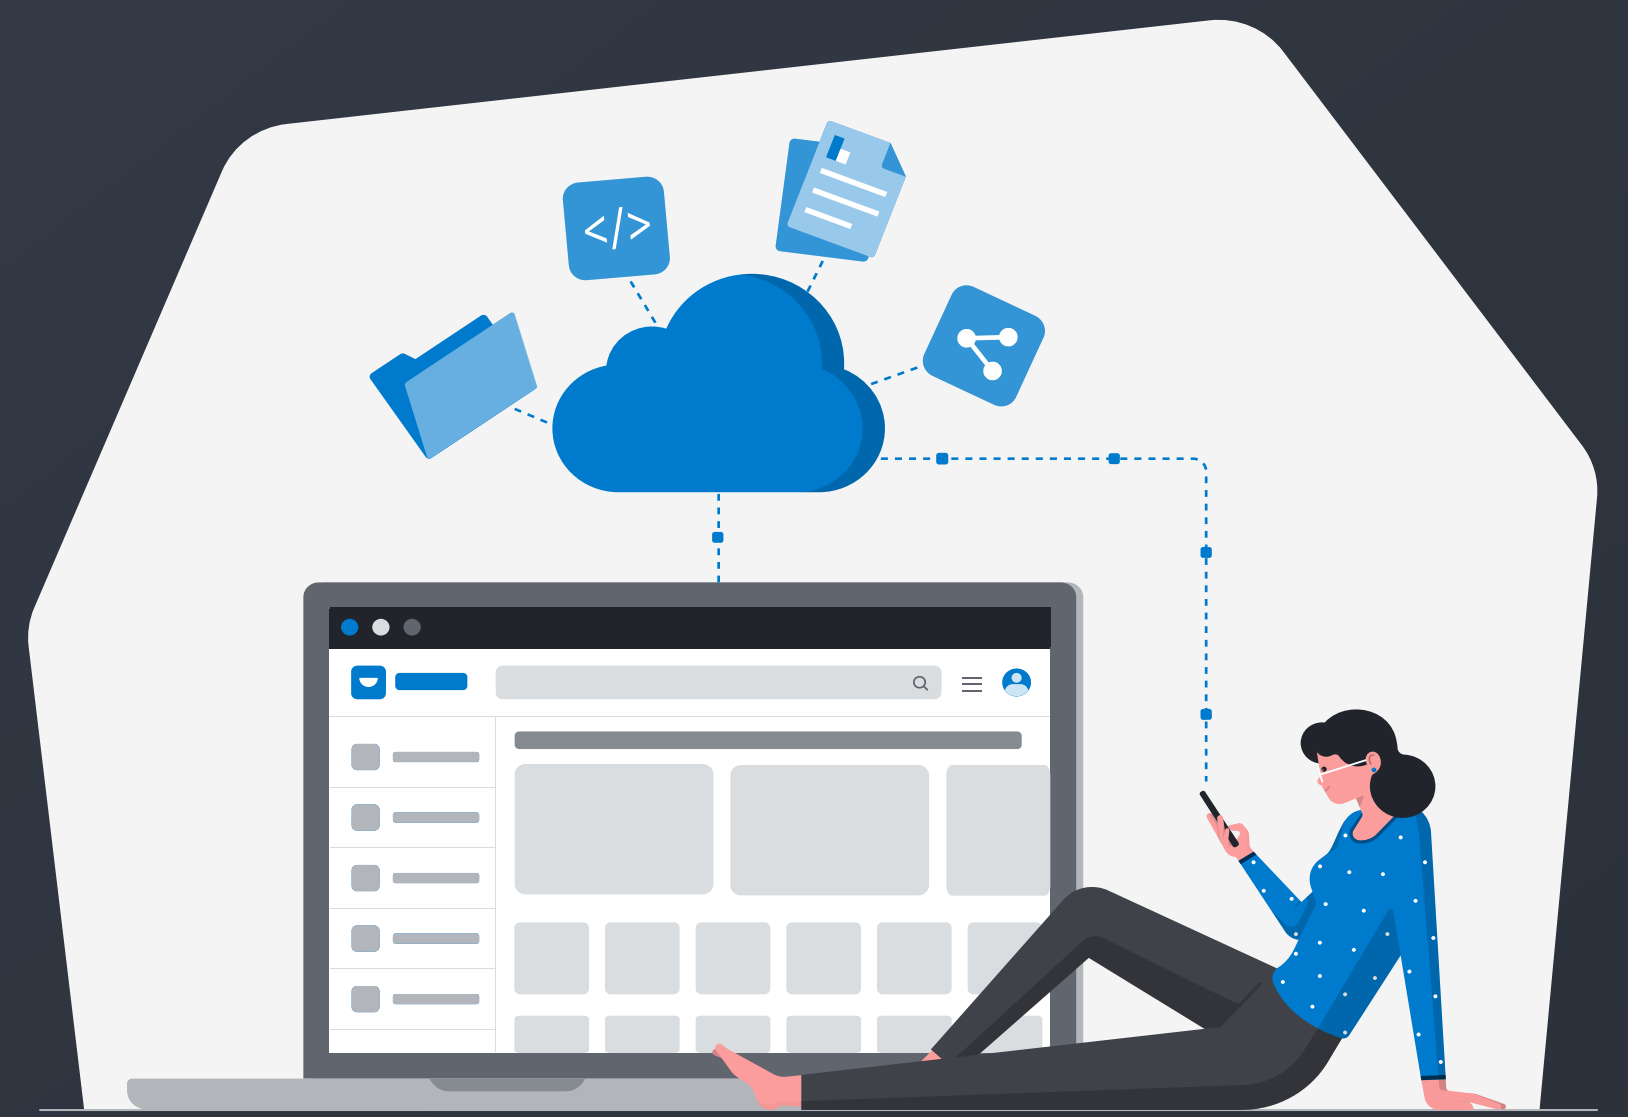

Sharing code through screenshots or web conferencing often displays poor image quality

Our Solution

An online code editing platform that allows you to program with others remotely from the same script.

File Storage and Sharing

Create and save multiple files and folders using our online cloud storage system. Share it with other users to work on these files together.

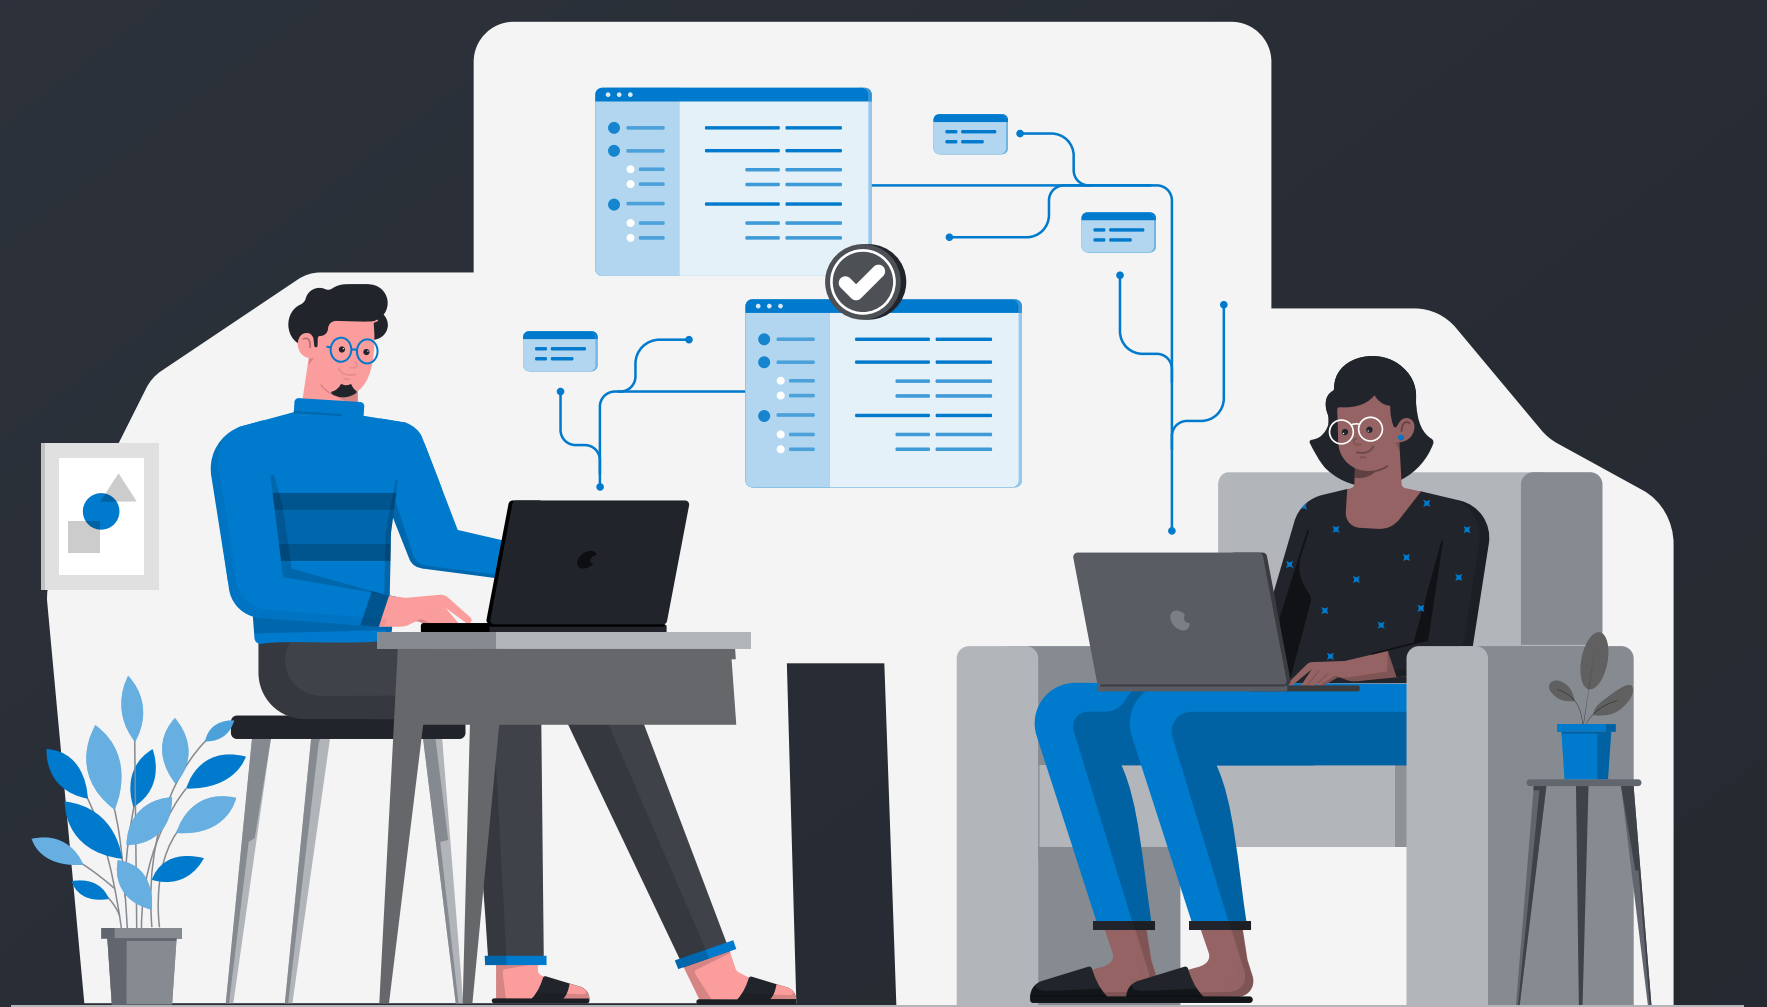

Multiple Languages

Choose from a variety of programming languages that our site supports including Javascript, HTML, Python, etc.

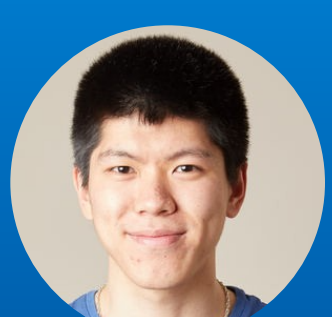

Real-Time Collaboration

Work with others on the same file in real time. All work is saved automatically and changes made offline are still updated to the file.
