

# Fliclets

## Collaborative Video Editing

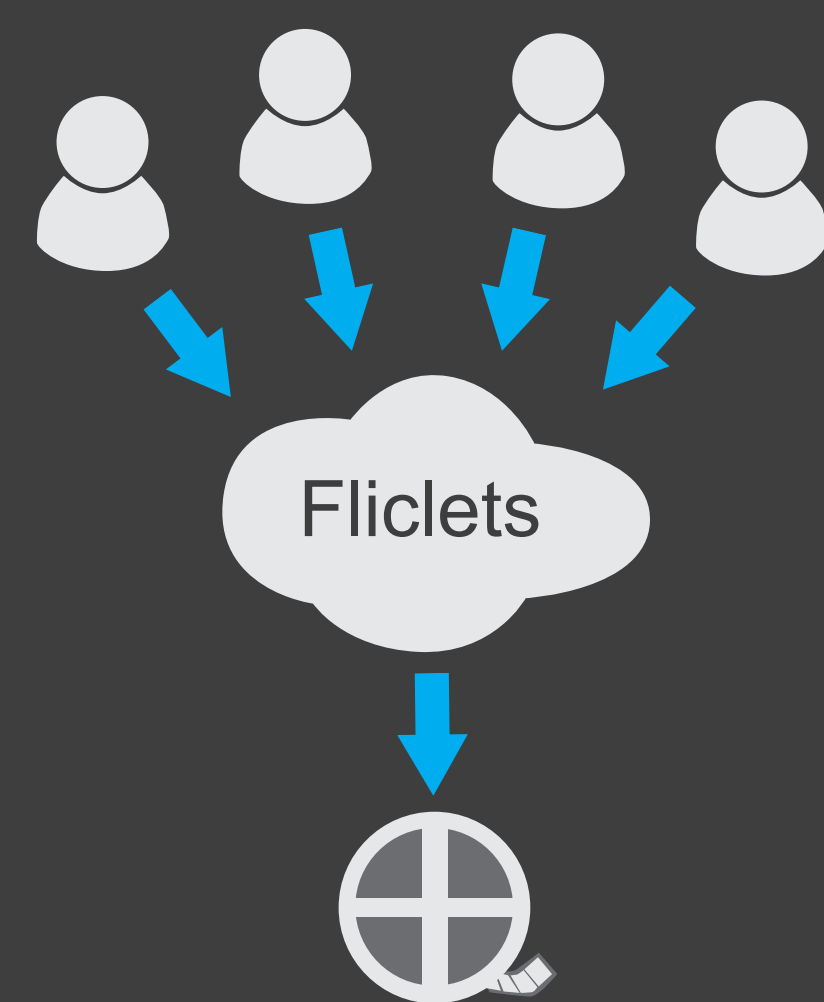

by Nathan Dobrowolski

### Problem

Teaching video editing is a time consuming task that requires excessive one on one time between a teacher and student.

### Solution

Fliclets is an online solution that allows for simultaneous editing of video. This allows for knowledge transfer outside of class and exposes a student's workflow for critique.

### Process Interviews, Personas and User Stories

Interviews were conducted with prior and current film school students and teachers. These informed the creation of personas and user stories.

### Process Wireframes and Prototypes

Working within the goals defined in the user stories, paper wireframes were created. Once the wireframes were finished, they were iterated upon as HTML prototypes. User testing was performed using both wireframes and prototypes. While users found the concept to be valuable, the UI proved too difficult to make sense of.
