Suggested Event Times

Problem Statement

How can we create a user-friendly web tool that facilitates the comparison of schedules to efficiently select meeting times?

Goals

- Help groups of people find meeting times in their busy and diverse schedules.

- Design a website that is easy to learn and allows the host to quickly create an event, enter their availability and share it with their group.

- Solve the flaws in existing tools using features like suggested event times and click-and-drag schedule entry.

Solution

Coordinate is an online scheduling platform that allows users to quickly organize schedules together to find optimal meeting times for the entire group,
CREATE EVENT

The process begins with the host creating the event and selecting the possible date and time ranges for the meeting.

INSERT AVAILABILITY

Users can enter their availability and preference for meeting times once they are invited to the event.

SHARE EVENT

Share event through a direct URL or an email invitation and the group's common availability will update automatically

SCHEDULE EVENT

Coordinate will recommend times for the host to choose from and automatically notify participants once they decide.
