In order to make sure our survey was understandable by users outside of the project, we created a usability survey open to all archivists and curators. We asked questions about the structure, content, and comprehension.

Usability Survey

One of the major constrictions was the total length, which could not exceed more than two pages. In order to include important information for donors, we created an online library guide which discusses the loan process and relevant laws.

Supplemental Information

The planning process took 11 weeks. During this time we drafted a work plan, contacted similar institutions, and delegated primary responsibility. Through planning we were able to help visualize a timeline, which helped workflow progress smoothly.

Planning

In the research portion of our project we spend several weeks focusing on copyright law, especially as it pertains to libraries, fair use, and temporary loans. We also examined loan agreements from similar institutions.

Research

After completing our research, we started drafting the physical form. We created four different iterations of the form and a final form. After major changes or meetings occurred, we would increase the version count by one.

Drafting

We received 14 responses from participants across the country. Over 80% of participants listed the form as ‘very good’. The most frequent comment was the lack of writing space, and the overall layout of the form is ‘extremely comprehensible’.

Survey Review

For many years, Widmer Brothers Brewing used a vintage Datsun truck for deliveries and to pick up grain and hops. In this shot, taken after they moved to Russell Street, the boys load kegs. Courtesy of Widmer Brothers Brewing.

Dinitro-o-cyclohexyl phenol burn on hop cones of Russian variety Serebrianka 1939. Original Collection: RG 025. From the report “Investigation on the control of hop pests 1939,” by HE Morrison

The Oregon Hops and Brewing Archives (OHBA) is part of Special Collections and Archives Research Center at Oregon State University. It is the first archive of its kind in North America, and a diverse collection of photographs, printed documents, and physical artifacts. The OHBA works with intuitions such as the Widmer Brothers, McMenamins, and the department of Food Science and Technology at OSU. Many of the items in the OHBA are not permanent parts of its collection, but loans from various breweries, individuals, and academic institutions in Oregon. The director of the OHBA works with donors on a regular basis to coordinate the items to be placed on loan, length of loans, and digitization permissions.

The Oregon Hops & Brewing Archives

What are the Oregon Hops & Brewing Archives?
