JOT

THE PROBLEM

Every year, funding for education is **decreasing** due to country-wide budget cuts. As a result, **classroom sizes are on the rise**. Everyday teachers must face the challenge of giving students enough individualized attention as they manage larger classrooms and smaller budgets.

PROBLEM STATEMENT

How do we build a **cloud-based platform** that will allow elementary teachers to **record** student skills not captured in traditional grades so that educators can comprehensively **track and support** their students' learning and progress?

OUR SOLUTION

Jot is a **web-based application** with a **mobile companion**, for both iOS and Android. Our **key features include:**

- Track students by classroom/subject on the web

- Add student notes with one click

- Quickly snap photos of student work through mobile

- Track students on specific skill points

- Provide summary stats on student progress and weaknesses throughout the year

- Share notes on students between teachers
