

Current Process

At the end of a month, coaches report all athletically related hours for their athletes, such as practices, to compliance who will review then send it to the students for validation.

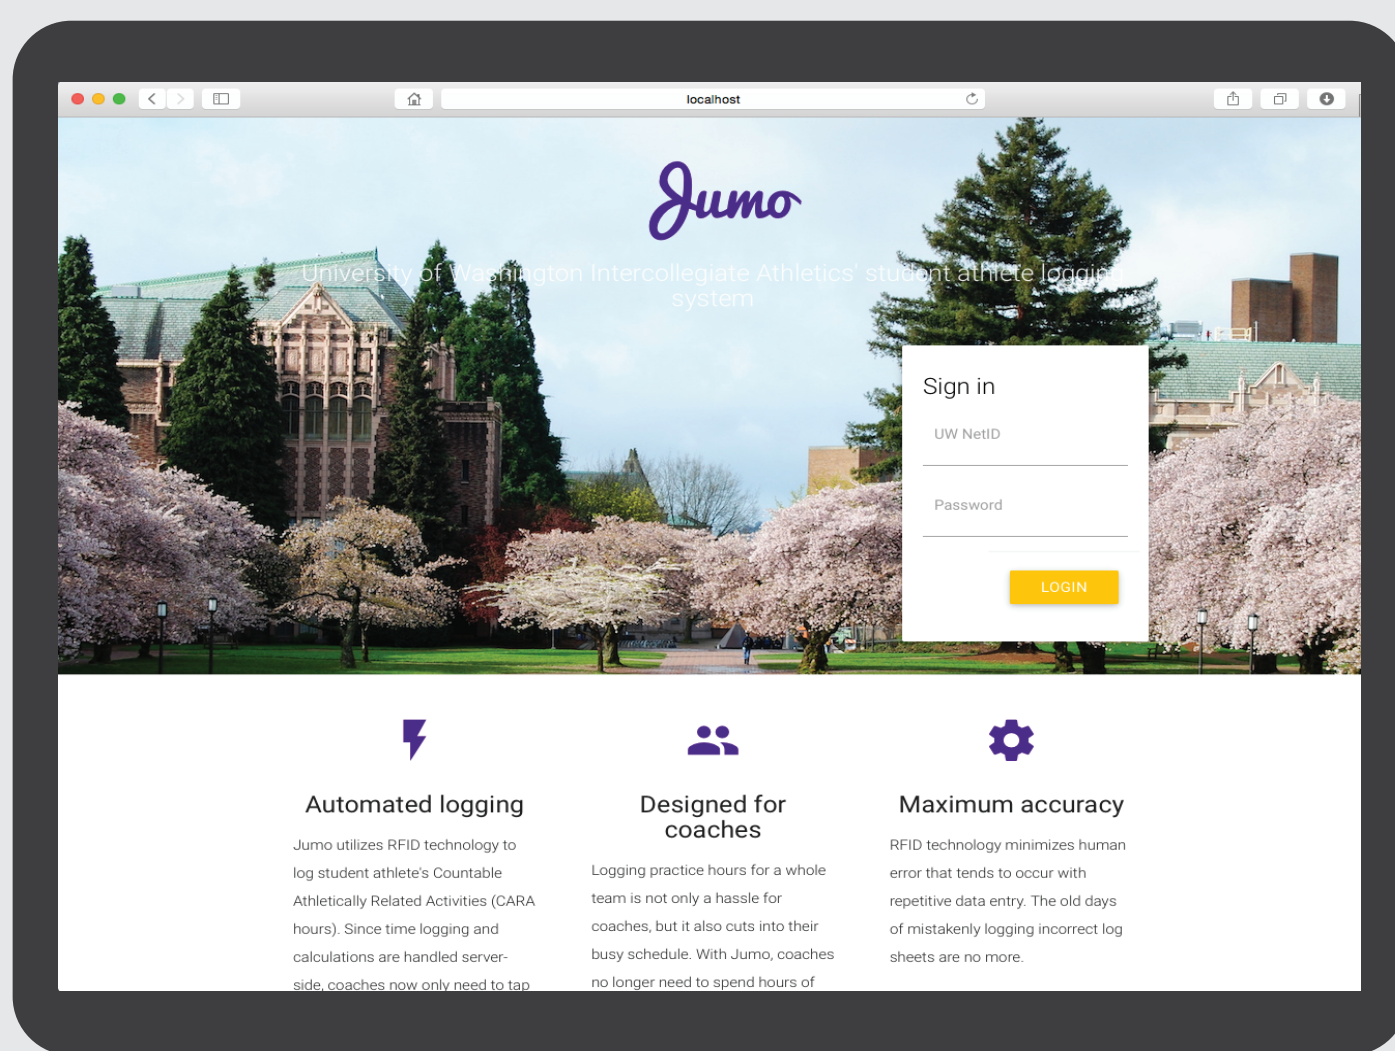

Problem

- Coach reporting is performed **manually**
- Logs are prone to **human input error**
- Current app has **no compliance verification**

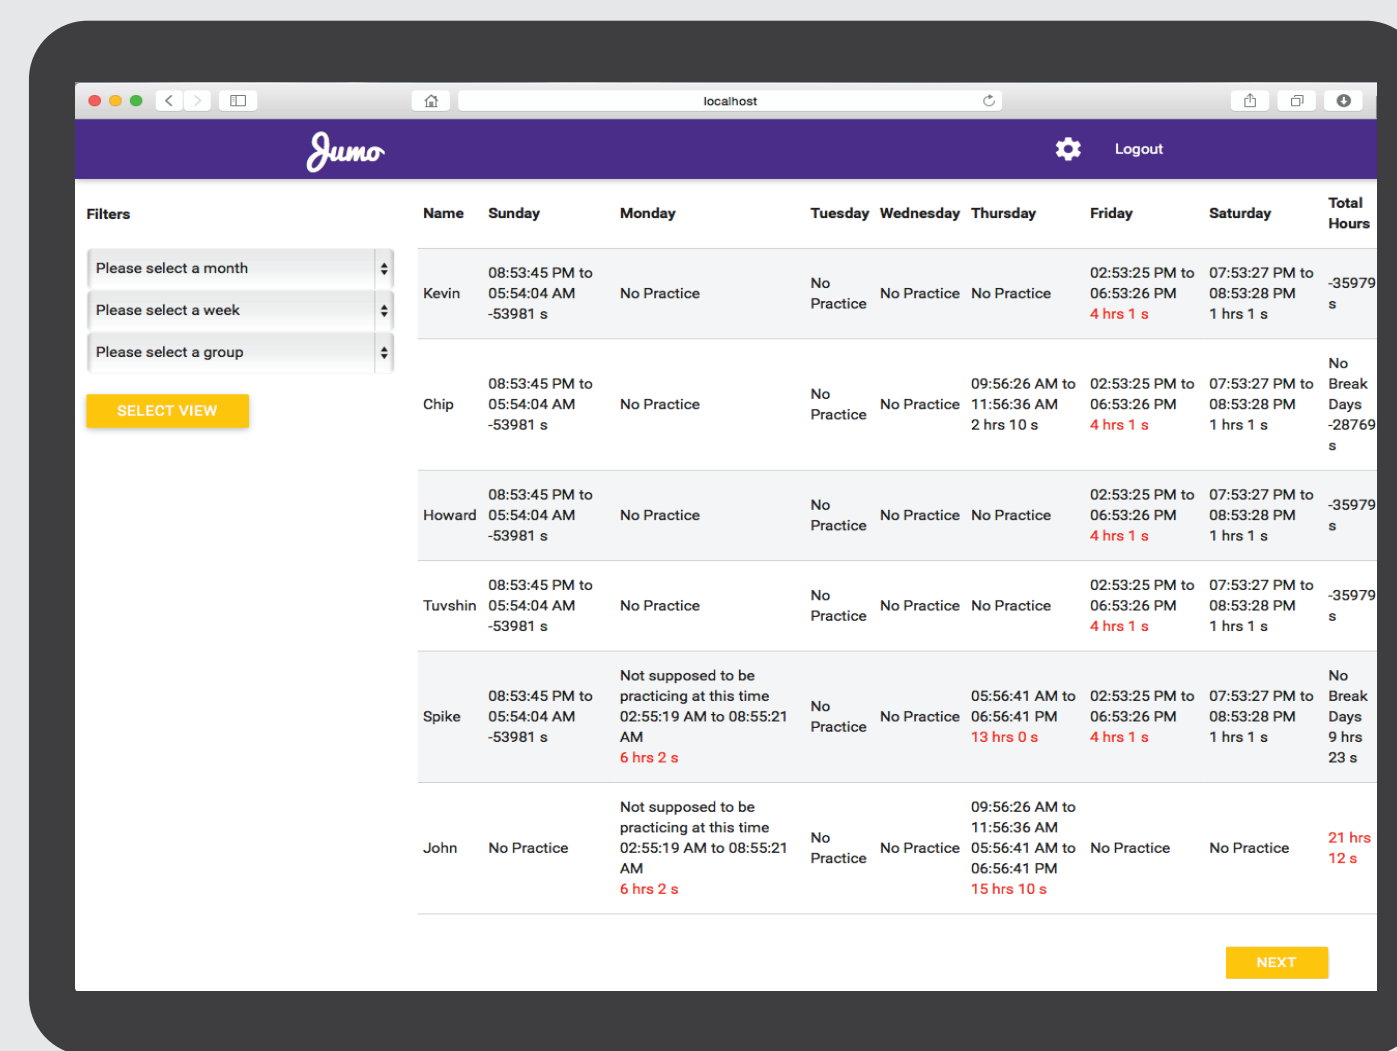

Solution

Jumo is a web application that simplifies athletic activity hour logging. Coaches use **RFID readers and cards** to automate reporting. With a single tap of a card, any human error that used to exist is eliminated and **hour logging is now instantaneous.**

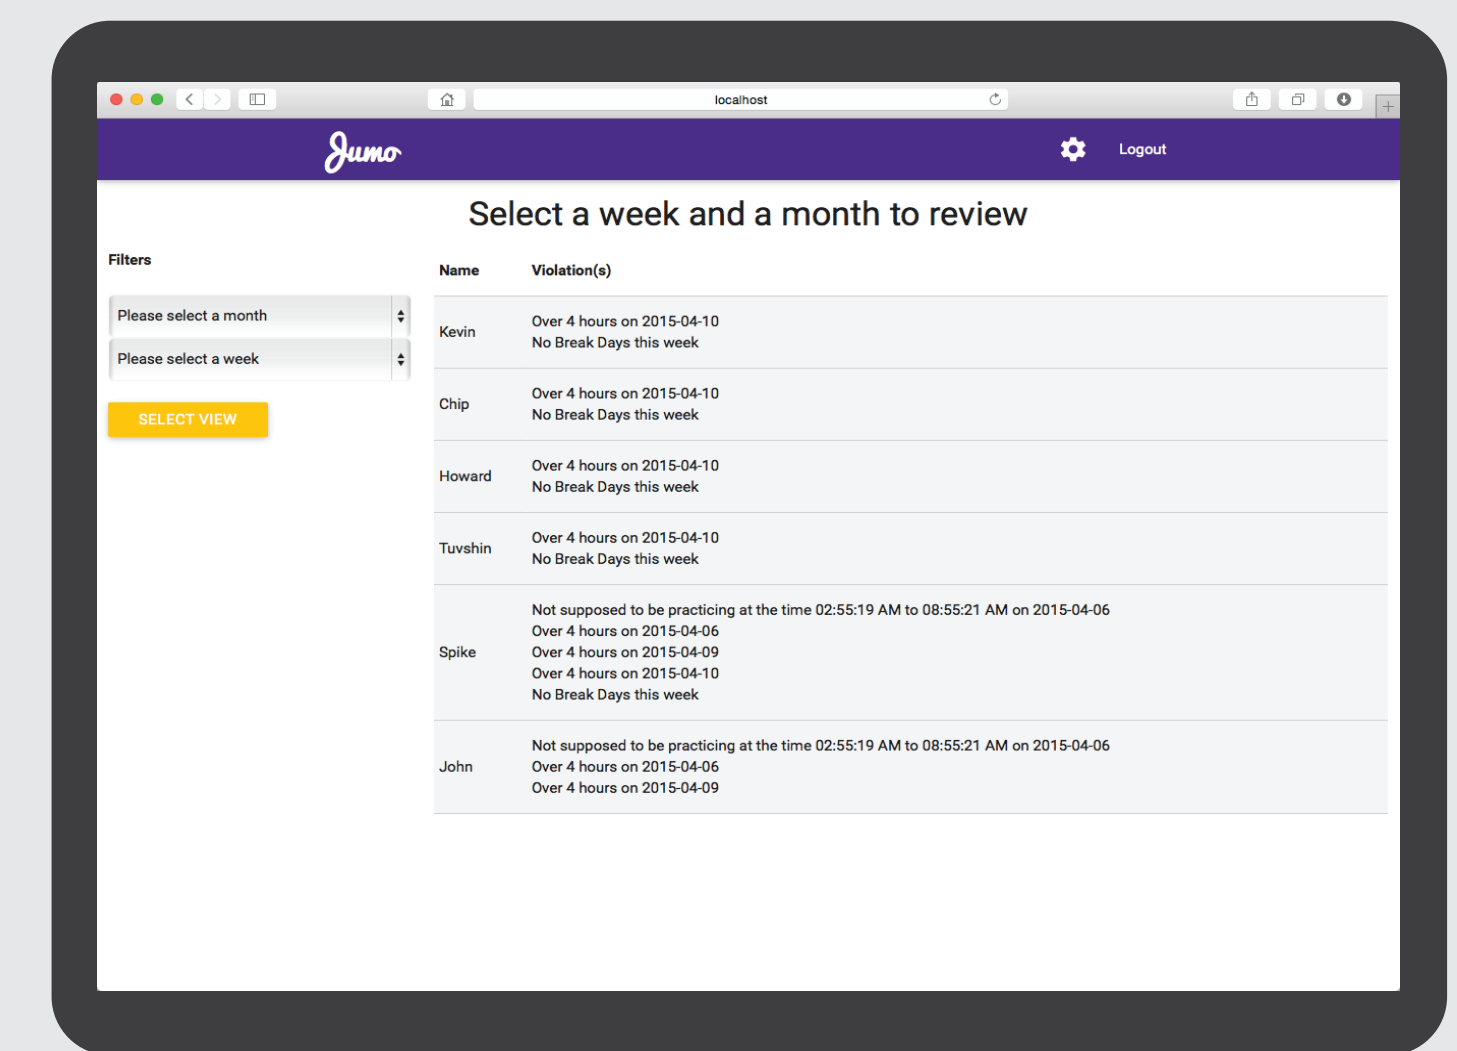

Jumo doesn't just benefit the coaches, it also eases the burden on compliance officers. When it comes time to review the hours for any NCAA violations, compliance officers can view the **pre-identified and flagged violation reports.**

Beautiful, easy to use interface, built for coaches

View summary of athlete practices

View the violations that were committed, when, and by whom

How it Works
