

Federal Litigation Database

Data Extraction and Manipulation

Information Opportunity: Proactively mitigate legal risk

\$350,000

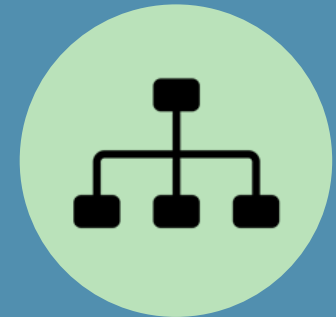

cost of an average lawsuit (losses, expenses, attorneys' fees)

Lawsuits are filed in federal database

Documents are examined for relevant keywords

Will use findings to create subject matter word clusters

Methodology

Use Python

- Manipulate files
- Extract case facts
- Sift contents

Next Steps

- Extracted content will be handed off for analysis
- Data to be used for a system to prevent litigation
