

PROBLEM

About **1 in 6** Americans have some kind of dietary preference.

Based on US 2015 population: 320 million

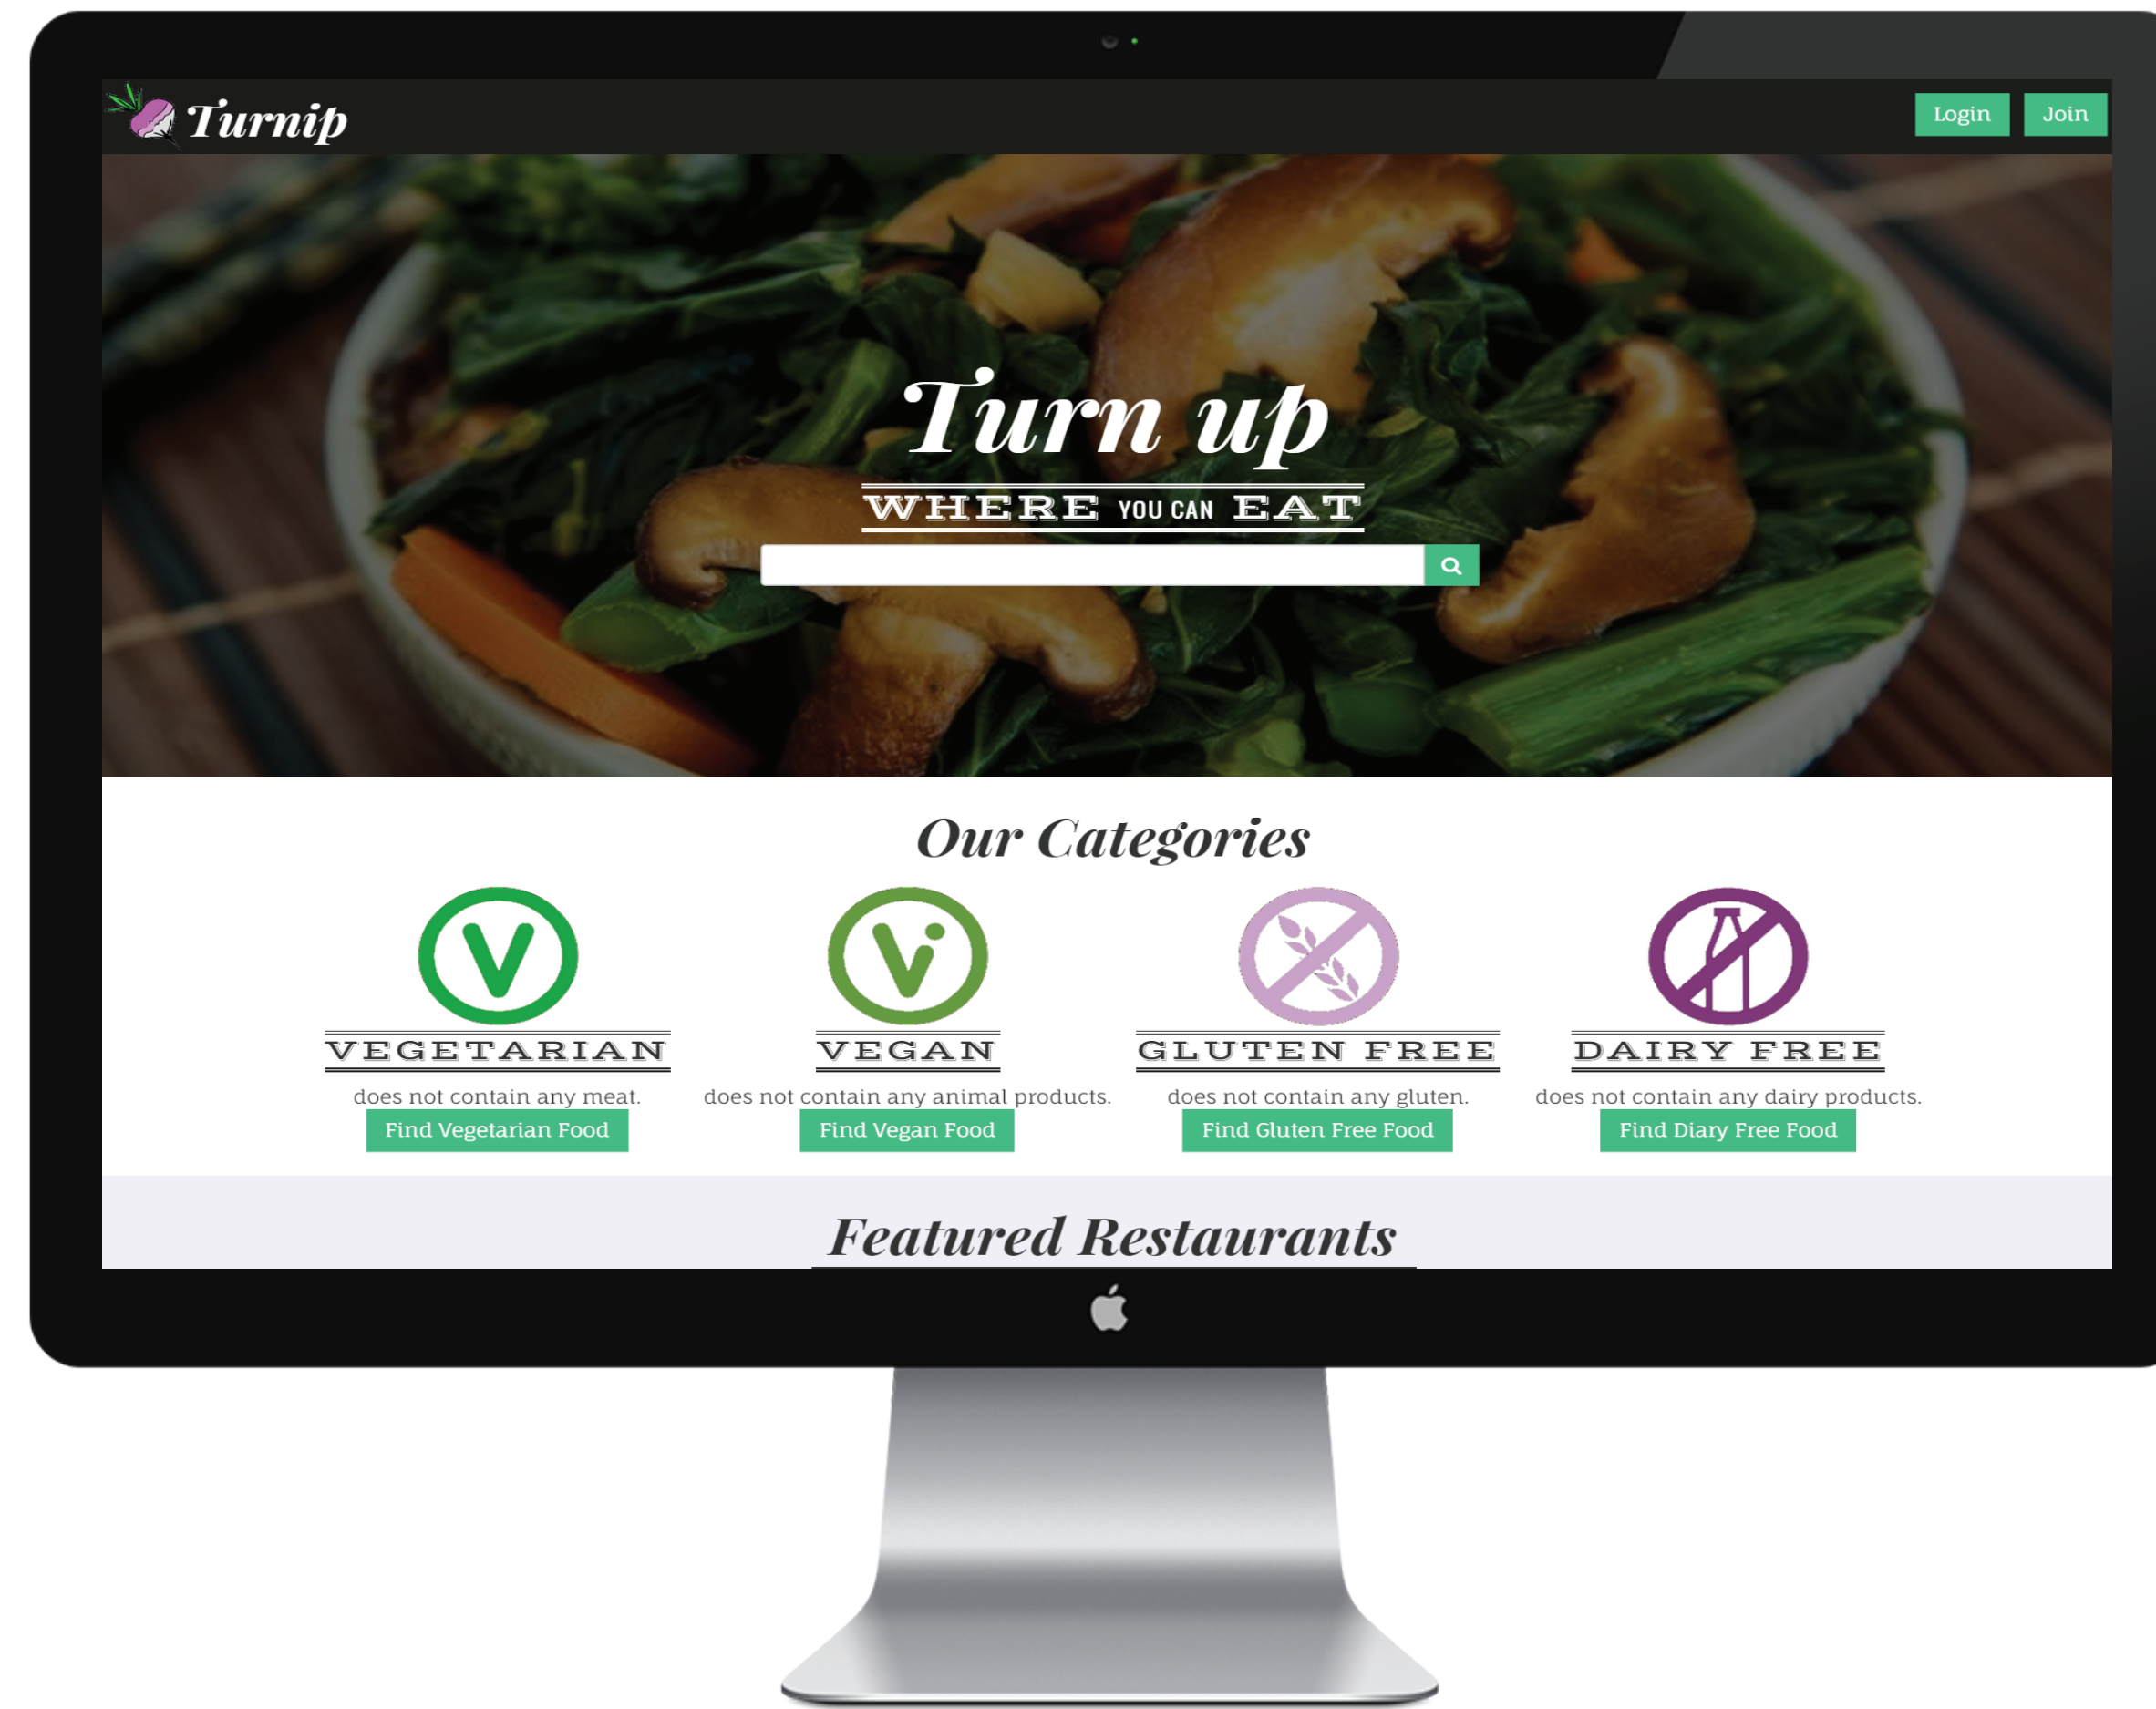

Reference:

- "Vegetarianism in America." *Vegetarian Times*.
- "What is Lactose Intolerance?" *Physicians Committee for Responsible Medicine*.
- "Gluten-Free Diet Appeals To 30 Percent Of Adults, Survey Says." *HUFFPOST HEALTHY LIVING* 6 Mar. 2013.

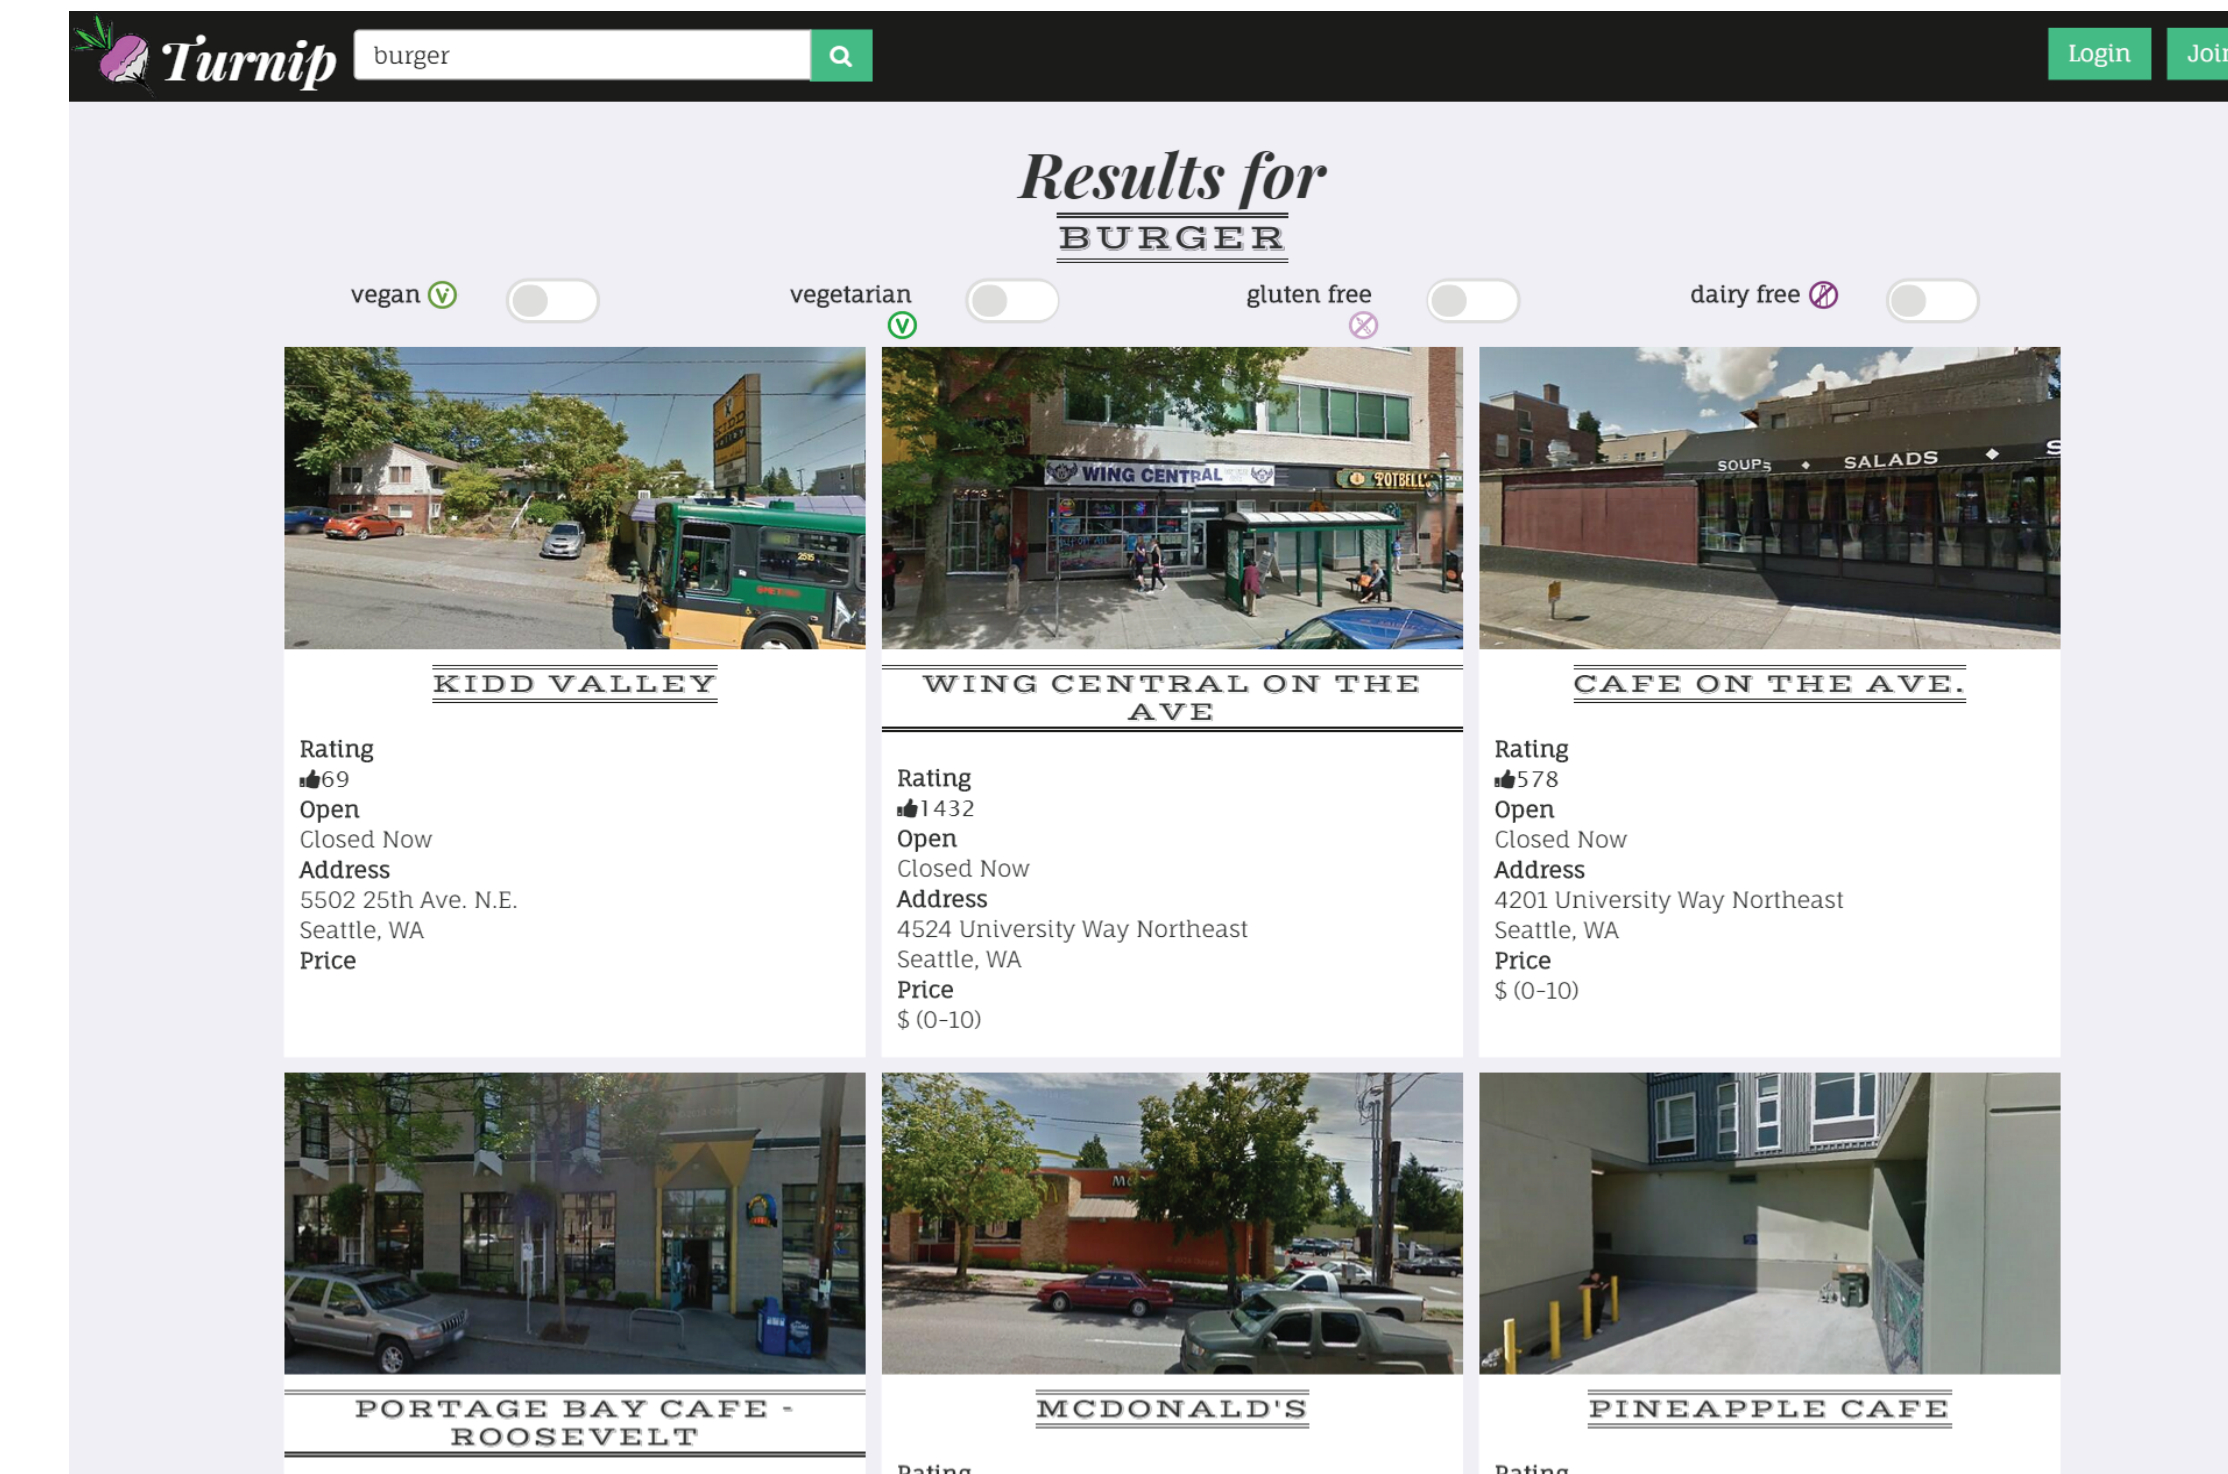

Current food searching websites usually don't provide detailed dish information of restaurants and only search for restaurants that cater to a sole dietary preference.

SOLUTION

Turnip's purpose is to help people find healthy food when going out to eat.

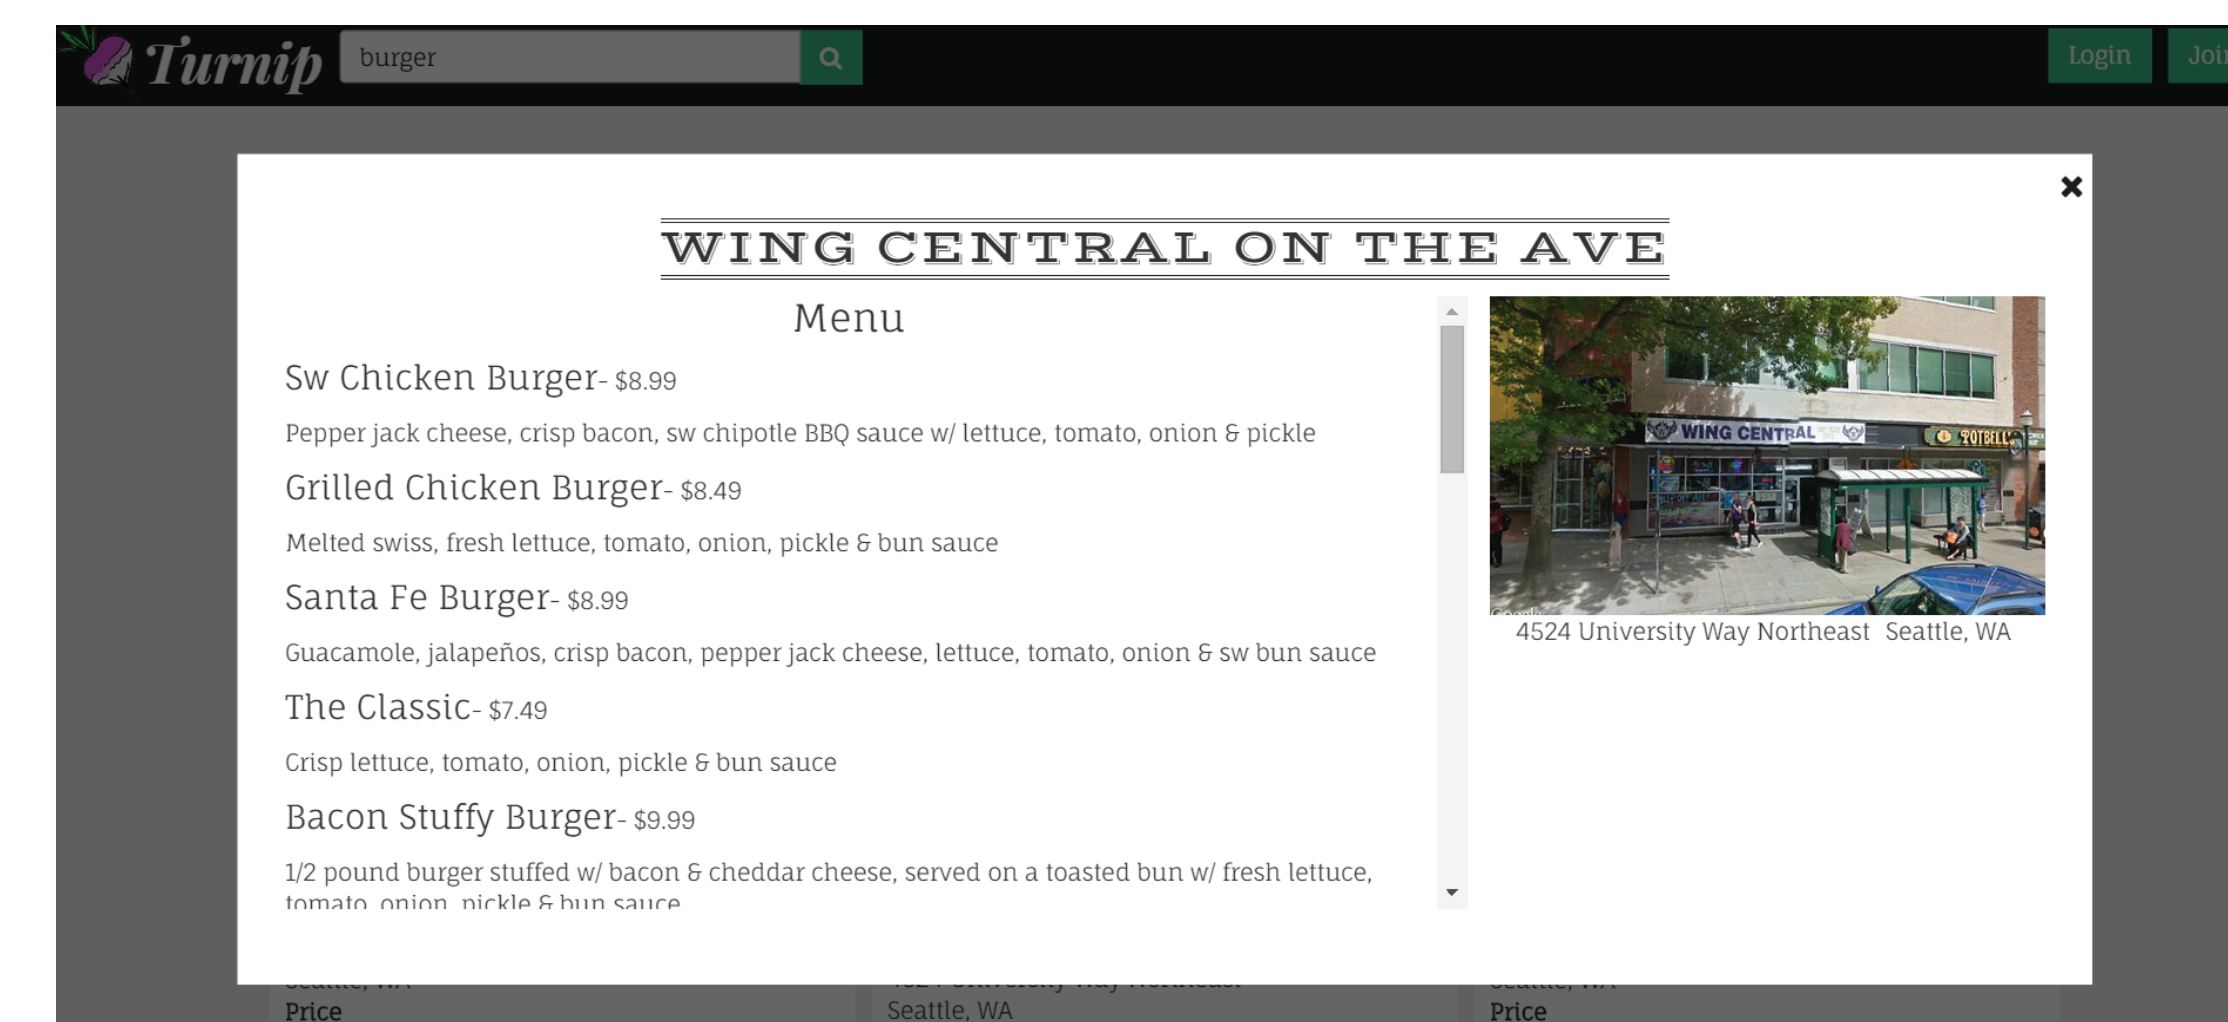

The website allows users to find food that fits their dietary preferences within the U-District at University of Washington. Users are able to search for food items in the search bar and / or select from our default dietary preferences: **Vegan, Vegetarian, Gluten free and Dairy free.**

The resulting page after the user's search displays general information of restaurants in a grid view.

Users can click on each restaurant card to view their menu with detailed information of dishes that match their search.

HOW IT WORKS

Search for food items

Filter results by dietary preferences

Browse the dishes

Choose a restaurant to visit

Rate the dish / restaurant
