Hipp🕐

Medical scheduling, simplified

Seattle Children's Hospital: The Current Picture

5 — Transcription Errors Per Day

70 — Scheduled Appointments Per Week

**400k** — Annual Patients Treated

The Problem

- Billing and medical systems are separate

- Appointment schedules are manually transcribed between systems

- No easy, HIPAA compliant way to show the operating room schedule with patient information

What is HIPAA?

HIPAA is a health patient information and privacy act passed in 1996. It governs how protected health information (PHI) is stored, displayed, and shared.

The Solution

- Web based, modern scheduling application

- HIPAA compliant data storage and access controls

- Modules to connect to existing hospital systems
